

Continuous XRD Analyser Manufactured by Vomax for:

The FCT ACTech Model C351 Continuous XRD Analyser

This analyser uses X-Ray diffraction techniques to measure the percentage of various crystalline structures in cement and mineral ores. In cement the results are used to determine the quality of the product and to enable control of the milling and additions to obtain targeted setting times and strengths.

More information about this analyser can be obtained from the FCT ACTech web site at: www.fctinternational.com
